Ethan Joyner is a mentor and FIRST Alumni for Team #6326, the Baltimore Bolts. His love and passion for building robots started when he was on his middle school's FLL Team. Going into high school, Ethan became the team captain of Baltimore City College's VEX robotics team. He led the team to be able to compete in the U.S. OPEN in only two years of the team's existence. In his senior year, Ethan joined his local FRC team, and even after graduating, he is still reaping the benefits of joining the team. From CAD modeling to general mechanical engineering, the skills he has obtained through FIRST have allowed him to secure an internship at Baltimore Design Works. At the heart of it all, he wants to make sure that others in his city can have the same, if not more opportunities than he had in high school involving STEM.
