

TaylorAnne Brown was a very shy kid, good at math, and homeschooled! When she was 9 her mother and a family that had 10+ years of experience with FIRST created a FLL team. This program really brought her out of her shell and GREATLY improved her communication and problem-solving skills. This program also helped her discover what she is passionate about, introducing people to STEM. She went to CSU Chico to pursue a Mechatronic degree and graduated in 2022. She also obtained an internship with the DoD as a Test Engineer in 2020 that is now her full-time job!
